

Student Assignment Brief

This document is intended for Coventry University Group students for their own use in completing their assessed work for this module. It must not be passed to third parties or posted on any website. If you require this document in an alternative format, please contact your Module Leader.

Contents:

- [Assignment Information](#)
- [Assignment Task](#)
- [Marking and Feedback](#)
- [Assessed Module Learning Outcomes](#)
- [Assignment Support and Academic Integrity](#)
- [Assessment Marking Criteria](#)

The work you submit for this assignment must be your own independent work, or in the case of a group assignment your own groups' work. More information is available in the '[Assignment Task](#)' section of this assignment brief.

Assignment Information

Module Name: Software Engineering

Module Code: CUH601CMD

Assignment Title: Group Case Study

Assignment Due: 5 November 2026, 18:00 hours

If you do not pass this assessment you may have an opportunity to resit it. If you do need to resit, you will be asked to use the feedback provided to revise your original submission, so that it meets the pass requirements for the module. You must clearly indicate the changes you have made in the new submission. Please check your SOLAR results and the submission links on your Aula module page to see when the resit is due.

Assignment Credit: 100% of the module mark

Word Count (or equivalent): 5000 words +/- 10%

Assignment Type:

Percentage Grade (Applied Core Assessment). You will be provided with an overall grade between 0% and 100%. To pass the assignment you must achieve a grade of 40% or above.

Assignment Task

The assessment for CUH601CMD Software Engineering is team-based. However, each team member will be assigned a relevant portion of individual tasks that will contribute to the completion of the team's project. Each team consists of 4 to 6 students, who will be working on the same project. The team can select one from the two study cases below.

- **Komodo Hub** – A Digital Platform for Community-Supported Animal Conservation ([LINK](#))
- **JustInTime** – FloatFry's Manufacturing Resource Planning ([LINK](#))

This module emphasizes a comprehensive software engineering approach to development. Therefore, the construction/coding aspect of the development of the proposed solution needs to be supported by equally strong evidence of practical project management and process control. To meet the objectives, students are asked to contribute to the creation of their team's comprehensive project report (~5000 words, citation excluded) covering three main aspects: **Project, Process, and Product**. Details on the required contributions from each role, the structure of the report document and what should be included in its content are available in the **HOW TO** documents below.

[HOW TO Manage your Team and Project](#)

[HOW TO Perform your Role](#)

[HOW TO Produce your Project Report](#)

In brief, each team is expected to complete a full cycle (scheduled for 8 weeks) of software development by strictly adopting Scrum. Initially, each student will take on one of the following roles in her/his team.

- Product Owner
- Scrum Master
- (Developer-1) System Architect
- (Developer-2) Database Engineer
- (Developer-3) Web Developer
- (Developer-4) Cloud Engineer

Every week, each team will shuffle its members so that every student has the opportunity to take on the roles of Product Owner, Scrum Master, and Developer (either) at least once during the development. Each team must create good cohesion among its members so that changing roles will not have a negative impact on the project and the product. The shuffling will stop on **25/10/2026** as the team is performing its last week of the development process. After that, each team will time to compile all project documentation and complete the project report before submission on **05/11/2026**.

Please be advised that, although you will see teams working on the same study case may produce certain resemblances in work, their project report should be considerably different from each other as each team will go through different dynamics and propose different solutions.

Submission Instructions:

- Your team's project report MUST be named in the following format:

[YOUR TEAM'S NAME]_report

- Your team needs to produce ONE AND ONLY ONE project report document. However, each member of your team MUST then submit the same project report document individually.
- The project report submitted should be in **.docx format (MS WORD)**.
- Each student needs to individually submit the project report document through Aula (the submission link will be given 2 weeks before the deadline).
- Submit the project report by **Thursday, 05 November 2026, 18:00 hours**.

Further instructions on how to produce the project report can be found in the [HOW TO Produce Your Project Report](#) document.

Note that this assessment is **Amber category in the use of AI**, which is "AI Used to assist."

Below is a summary of where and how you used AI tools at the end of your work before your reference list. This could include the adaptation of the following table (as an example only):

Tool	How used in this assignment
e.g. ChatGPT-3.5	Key word search on topics related to learning outcomes
e.g. Microsoft Copilot	Summarising documents as part of background research

If you experience any technical problems when trying to submit your work, please consult Aula help via the question mark link. If these problems are experienced at the time of the submission deadline and cannot be quickly resolved, please capture screenshots as evidence and email these and your completed assessment to the module leader as soon as possible. Whilst this cannot be marked it could be used as evidence that you've gained no time advantage on your work should this be needed for an appeal.

Marking and Feedback

How will my assignment be marked?

Your assignment will be marked by the module team.

How will I receive my grades and feedback?

Provisional marks will be released once internally moderated.

Feedback will be provided by the module team alongside grades release.

Feedback comments can be accessed by clicking on your submission in Turnitin and selecting the comments icon. The completed marks rubric can be accessed through the rubric icon.

Your provisional marks and feedback should be available within 2 weeks (10 working days).

What will I be marked against?

Details of the marking criteria for this task can be found at the [bottom of this assignment brief](#).

Assessed Module Learning Outcomes

The Learning Outcomes for this module align to the [marking criteria](#) which can be found at the end of this brief. Ensure you understand the marking criteria to ensure successful achievement of the assessment task. The following module learning outcomes are assessed in this task:

1. Evaluate an architectural design against accepted quality criteria
2. Select, evaluate and use tools and techniques to successfully manage a large scale software project, including configuration management and version control
3. Use a range of appropriate tools to contribute to the development of a solution to a real-world problem.
4. Select, evaluate and apply standards, tools and techniques for assuring software quality
5. Identify and engage with relevant social, professional, legal and ethical issues on a practical computing project.

Assignment Support and Academic Integrity

If you have any questions about this assignment please see the [Student Guidance on Coursework](#) for more information.

Spelling, Punctuation, and Grammar:

You are expected to use effective, accurate, and appropriate language within this assessment task.

Academic Integrity:

The work you submit must be your own, or in the case of groupwork, that of your group. All sources of information need to be acknowledged and attributed; therefore, you must provide references for all sources of information and acknowledge any tools used in the production of your work. We use detection software and make routine checks for evidence of academic misconduct.

It is your responsibility to keep a record of how your thinking has developed as you progress through to submission. Appropriate evidence could include: version controlled documents, developmental sketchbooks, or journals. This evidence can be called upon if we suspect academic misconduct.

If using Artificial Intelligence (AI) tools in the development of your assignment, you must reference which tools you have used and for what purposes you have used them. This information must be acknowledged in your final submission.

Definitions of academic misconduct, including plagiarism, self-plagiarism, and collusion can be found [on the Student Portal](#). All cases of suspected academic misconduct are referred for investigation, the outcomes of which can have profound consequences to your studies. For more information on academic integrity please visit the [Academic and Research Integrity](#) section of the Student Portal.

Support for Students with Disabilities or Additional Needs:

If you have a disability, long-term health condition, specific learning difference, mental health diagnosis or symptoms and have discussed your support needs with health and wellbeing you may be able to access support that will help with your studies.

If you feel you may benefit from additional support, but have not disclosed a disability to the University, or have disclosed but are yet to discuss your support needs it is important to let us know so we can provide the right support for your circumstances. Visit [the Student Portal](#) to find out more.

Unable to Submit on Time?

The University wants you to do your best. However, we know that sometimes events happen which mean that you cannot submit your assessment by the deadline or sit a scheduled exam. If you think this might be the case, guidance on understanding what counts as an extenuating circumstance, and how to apply is [available on the Student Portal](#).

Administration of Assessment

Attempt Type: Standard

Component Code: CW

Assessment Marking Criteria

IMPORTANT: You will be assessed on [1] your individual contributions (weighted 60% of the mark) to your team's work, and [2] your team's overall effort toward the completion of the project and the report (weighted 40%).

INDIVIDUAL CONTRIBUTIONS TO THE PROJECT (60% of the total mark)

	Fail 0 to 29%	Fail 30, 35%	40 to 49%	50 to 59%	60 to 69%	70 to 79%	80 to 100%
Process Control artifacts 15% ILO 2, 3, 4, 5	Poor understanding of the project, and minimum explanation of the application of Scrum events and the development of only one artifact.	Poor understanding of the project, and a brief explanation of the application of Scrum events and the development of only a few artifacts.
